Summary

Game developer with around 2 years of professional experience in Unity and C#. Experienced in building gameplay systems including combat, enemy AI, multiplayer and UI. Focused on clean architecture, reusable systems, and maintainable code. Strong at debugging, system design, and improving existing gameplay features.

Experience

Game Developer, Skynet Games
Feb 2026 – Present
Building gameplay, customization, and UI for an early-stage mobile platform where companies promote their products through branded minigames.

Game Developer, 3dar (Eggscape)
May 2023 – Feb 2025
Unity, C#, Photon Quantum, Oculus XR

- Worked on the enemy AI using pathfinding, obstacle avoidance and a custom combat system using FSMs and behavior trees, with unique states per enemy.
- Programmed player combat mechanics, including a flying kick, a spinning kick, and a wall-climbing mechanic.
- Wrote a grabbing and throwing system that let players pick up objects and use weapons.
- Did game maintenance, fixing bugs.
- Built the lobby shop for clothing and skin selection.
